## PROJECTS

### Multi Purpose Player System

A small project built using java. It has a multi purpose player system which includes audio, video, images and text in the same window.

### Student Management System

A DBMS implemented using Oracle Database for back end and c#.net for the front end. The main intention of the project is to maintain the student details.

### Online Voting System

Voting is an important aspect for democratic countries. Election decides which candidate is capable and also decides the future of that country therefore elections should be as transparent as possible and should have a high level of security. Online voting system using android application which will give better system security and vote casting system becomes a less time consuming process and provides better results.
